DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

Putting my objects together for the preview function.

_____

2. What parts of encapsulating your logic were hard?

Getting started and grasping how to execute what I have learned about encapsulation.

_____

3. Is abstracting the book preview a good or bad idea? Why?

It is a good idea due to the fact that it isolates what is running in that specific part of the code and you can then control what precisely interacts with the code and keeps it safe from breaking or possible malicious intents from the outside.

_____
